

**In the Specification:**

Please replace the paragraph beginning at page 5, line 11, with the following rewritten paragraph:

B1  
In one mode of operation, the display engine 220 will be providing display information to the display 221. The images being processed and displayed by the display engine 220 are received either from the system bus, or from a video memory, neither of which are illustrated in Figure 1. In one mode of operation, only the display 221 is being driven. When no FPD is available, the monitor detect pin is monitored by detect module ~~221~~220 to determine when an external FPD becomes available. This is better illustrated with reference to Figure 2.
